METHOD AND SYSTEM FOR PROVIDING FRAME RATE ADAPTION

ABSTRACT OF THE DISCLOSURE

A system for providing frame rate conversion for audio data is provided. The system includes a first client configured to transmit audio data frames at a first frame rate, a second client configured to receive audio data frames at a second frame rate. The first frame rate is different from the second frame rate. The system further includes a device configured to facilitate transmission of audio data frames between the first client and the second client. The device is further configured to receive the audio data frames from the first client at the first frame rate, store the received audio data frames in an intermediate storage area and repackage the stored audio data frames into one or more frames for transmission to the second client at the second frame rate.
